

SALISBURY

by Honeywell

PREMIUM LIGHT WEIGHT HRC4 PRO-WEAR

Salisbury by Honeywell has blended arc flash protection with comfort to create a new, lighter 40 cal/cm² arc flash protective suit. The Premium Light Weight line leads the way towards a new standard in arc flash protective clothing that improves worker comfort without compromising safety.

Introducing the lightest HRC 4 Suit available.

There is no other product on the market that provides the same level of safety, comfort and quality as one will find with Salisbury's Premium Light Weight Suit. The PLT is uniquely designed to provide workers with increased comfort without compromising their safety. Offering the same protection as a standard 40 cal/cm² Arc Flash suit, the Premium Light Weight is a preferred choice among electrical workers due to its lighter fabric weight. At 11 oz/yd², this material is the lightest available and meets all the necessary standards to keep you safe from arc flash.

The Salisbury Advantage

Salisbury always strives to provide the best possible products to improve worker comfort without compromising safety. The PLT is another innovative product that was created to enhance user comfort. In addition, Salisbury offers convenience by enabling the Premium Lightweight Suit to be ordered by individual garment (Coat, Hood, Overalls) or together within a kit option.

Agency Listings

Premium Light Weight Coat and Bib Overalls with the NEW Lift Front Hood w/ PLT Shroud

Features

Comfort

- Total fabric weight of 11 oz/yd² compared to 18.5 oz/yd² makes this suit the lightest in the industry
- Lighter fabric allows for added ease of movement
- Keeps user cooler longer than a standard HRC 4 suit
- Adjustable gussets on overall cuffs allow for a more comfortable fit

Safety

- Longer coat creates better body coverage
- Complies with NFPA 70E HRC4
- Meets ASTM F1506-02A
- Meets ASTM F1959M/F1959M-99
- Arc Rated for the life of the garment
- Heat Attenuation Factor of 93.20%, meaning garment is not only flame resistant, but resists 93.2% of the heat experienced in an arc flash
